Workshop Data Platform
Runbook: Handling Failed Imports

Fictional document created for the InterSystems IRIS Vector Search workshop. Version 2026.11

1. Handling failed imports

This runbook is fictional and exists only for the IRIS Vector Search workshop. In the workshop environment, failed imports are moved to /workshop/quarantine and retained for 11 days. After 11 days the quarantined files are deleted automatically.

To retry a failed import, fix the problem reported on the Imports page, then move the file from /workshop/quarantine back to the watched folder. The next scheduled run picks it up again.
